Location	Abuja, Nigeria · Open to gigs, internships and junior roles

SUMMARY

Software Engineering undergraduate who ships whole products: I research the users, design the interface, build the web or mobile app, and write up what I learned. Experience across Next.js and React, Flutter and Supabase, applied cryptography and Ethereum tooling, with six projects built and defended at Bitnob. I use AI tools such as Claude Code and Cursor to move faster, and I test and measure what I claim.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Dart, HTML and CSS
Web	React, Next.js, Vite, Tailwind CSS, Framer Motion, MDX, accessibility (WCAG AA), SEO and performance
Mobile & backend	Flutter (Android, web PWA), Supabase, Google Apps Script, Vercel Functions, Render
Web3	Ethereum (Sepolia), ethers.js v6, JSON-RPC (Alchemy), event logs and ABI decoding
Security & crypto	AES-GCM/CBC, RSA, ECDSA, Diffie-Hellman, HMAC, Argon2id, X.509 and TLS fundamentals, secure API-proxy design
Product & AI	Product management (PRDs, SRS, survey research), UI/UX design in Figma, AI-assisted development (Claude Code, Cursor), technical writing
Testing & tools	pytest, Vitest, Git and GitHub, CI basics
Strengths	Product management · AI development · Leadership · Critical and systems thinking · Content creation · Lifelong learning

EXPERIENCE

Software Engineering Intern (SIWES), Bitnob (a Mainhedge Inc. company), Abuja — Jul 2026 – Sep 2026

Cross-border payments on Bitcoin and stablecoin rails; ISO 27001 and SOC 2 Type II certified. Reported to Olayinka Omoniyi, Software Engineer.

- Built and defended six technical projects in applied cryptography and blockchain application development, presenting weekly to an engineering supervisor.
- Built **ContractLens**, a React/TypeScript dashboard that decodes Ethereum event logs into readable smart-contract activity.
- Implemented PKCS#7 padding and AES-CBC from first principles in Python with a pytest suite proving correct behaviour and two deliberately introduced bugs.
- Wrote case studies on Kerckhoffs's principle and stream ciphers (RC4, Salsa20, ChaCha20), and benchmarked 3DES against AES (roughly 10x throughput gap).
- Took part in code reviews on the Bitnob application, flagging optimisation and security improvements.

PROJECTS

SignalMap: Campus Network Signal Mapping — signalmap-8117.onrender.com

Flutter, Dart, Supabase, Figma, Render

- Product and development. Students report signal quality and each campus building is coloured by carrier only after 5+ reports from 3+ users within 30 days. Shipped as an installable PWA.
- Analysed 60+ survey responses before designing; built a pixel-accurate Flutter UI from a Figma export; set up a Docs-as-Code structure (PRD, SRS, architecture docs).

Nile Christian Fellowship Website ncf-website-ten.vercel.app
Next.js, TypeScript, Tailwind, Framer Motion, Vercel, Apps Script

- Static rebuild of a fellowship's site: 35 routes and no backend; forms hand off to WhatsApp, email or Google Sheets.
- Collapsed 22 border radii into a 7-step scale, made muted text pass WCAG AA, and cut 51 photographs from 171 MB to 9.2 MB.

ContractLens: Ethereum Smart-Contract Activity Dashboard github.com/DanDeeLegend/ContractLens
React, TypeScript, Vite, ethers.js v6, Alchemy JSON-RPC, Vercel Functions, Vitest

- Reads Sepolia event logs and decodes them into an activity feed: Keccak-256 event-signature matching, then indexed and non-indexed parameter decoding.
- Moved the RPC key behind a server-side proxy (method allowlist, same-origin check, size and log-range limits, rate limiting); windowed log scanner adapts to provider limits; 34 tests.

Applied Cryptography Lab: 13 chapters, built and attacked github.com/DanDeeLegend/cryptography-grind
Python, PyCryptodome, OpenSSL, pytest

- From-scratch AES, GCM, RSA, Diffie-Hellman, ECDSA, HMAC and a mini TLS handshake, each checked against published vectors or OpenSSL (141 tests); reproduced ECDSA nonce reuse, shared-prime RSA and padding-oracle attacks.
- Every chapter published as a write-up with measured results on my portfolio blog.

Padding Scheme Explorer github.com/DanDeeLegend/padding-scheme-explorer
Python, PyCryptodome, pytest

- PKCS#7 padding from scratch inside real AES-CBC, shipped beside two deliberately buggy variants with tests proving how each fails.

NACOS Nile Landing Page (competition entry) nacos-nile-landing.vercel.app
Next.js, React, Vercel

- Single-page site for the Nile University chapter of the Nigeria Association of Computing Students: initiatives, nine-member council, full SEO metadata and custom brand assets.

The Board: Personal Life-Management App (in development)
Flutter, Dart

- Business-management metaphor applied to personal life; measures drift from the user's own baseline. Phase 1 done: pure-Dart domain model and drift-detection engine with tests.

Bright Spot: Local-First Password Manager (planned)
Android, Flutter (planned)

- Spec and architecture for a password manager that migrates devices by QR scan instead of cloud sync; implementation not started.

School Homepage Redesign (concept) github.com/DanDeeLegend/web-redesign-offers
HTML, CSS, JavaScript

- Redesign pitch for an Abuja school's homepage: brand-sampled design tokens, WCAG AA contrast, no framework.

This Portfolio me-portfolio-gamma-one.vercel.app
Next.js 16, React 19, Tailwind v4, MDX, Vercel

- Designed and built with Claude Code: hand-drawn illustration system, MDX blog (20 posts), CSP and security headers, structured data, and a client-side search assistant that answers only from the site's own content.

WRITING & CONTENT

- **Applied cryptography series** (13 chapters plus deep dives): me-portfolio-gamma-one.vercel.app/blog
- **Medium** @danielaminu2 (engineering) · **Substack** @dannii0 (faith, growth, reflection)

EDUCATION

B.Sc. Software Engineering, Nile University of Nigeria, Abuja · Faculty of Computing Expected 2028

INTERESTS

Frontend design · AI engineering · blockchain and cryptography · technical writing · building products for real users
Outside of code: gaming, football, movies, dancing and reading
